Subject: public comment on Wind River Reservation Pollution Discharge Permits

Lozano,

Please make sure that you have the EPA revise the rules on discharging wastewater from the fracking operations to make sure that #1 they have to list every single chemical used and #2 try to make it so they cannot even dump the water without treating it.

It seems pretty unreasonable that the EPA, with the current rules they have, would let this happen which is against their own rules.

I am but one person writing but I am representing thousands.

Corey
